

Note Taking Application

Introduction

The given Flask Note Taking Application was initially broken and contained multiple functional issues in both backend and frontend code. The application was refactored and debugged to ensure proper functionality.

Bugs Identified

1. Route only accepted POST requests

- Browser initially sends GET request.
- Application failed to load.

Resolution

Added GET method along with POST.

2. Incorrect data retrieval method

- Used `request.args.get()` instead of `request.form.get()`.
- POST form data was not captured properly.

Resolution

Replaced with `request.form.get()`.

3. Form method not specified

- HTML form defaulted to GET request.

Resolution

Added `method="POST"` inside form tag.

4. Empty notes allowed

- Blank notes were getting stored.

Resolution

Added condition to validate note before appending.

5. Poor User Interface

- Application lacked styling and usability.

Resolution

Added CSS styling and improved UI design.
